

What criteria for choosing a computer?

Performance and equipment can vary considerably from one model to another. Screen size, storage space, processor, graphics card, connectivity... there are numerous parameters to take into account when purchasing. Here are our tips for choosing the right computer.

We are going to take an example of a laptop with a price around the 600\$, and give the advantage and also the inconvenience and the kind of thing we are going to do with it.

Also take an example of a computer with a price around 1200\$, give advantage and inconvenience and also the inconvenience and the kind of thing we are going to do with it.

The component need a computer :

-Graphic card

-Processor

-motherboard

-Alimentation

-Stockage

-Memory card

-Fans

-Ventirad

Laptop

Advantage

- The laptop was designed to be compact and lightweight. They are easy to carry and you can travel with them.
- Even if the laptop is specific to the professional working you can use it for the gaming
- The third point is the battery now with the technology we have a battery life can hold a whole day. This provides you a little part of freedom because you are not obliged to have an electrical prize around you.
- Unlike bulky desktop computers, laptops do not require much space. This is particularly advantageous in limited living or working spaces.

Inconvenience

- Battery life, don't underestimate the importance of battery life, especially if you're frequently on the go.

- Essential to assess your performance requirements accurately. Don't overspend on high-end components if you only need basic computing tasks, but also avoid skimping on specs if you'll be running demanding software or multitasking heavily.

Computer

Advantage

- rapport quality price
- More easy to complete composant and adding
- Size more various
- Better alimentation (more voltage)
- More easy to fix
- Can be easier to move.

Inconvenience

A desktop computer is generally heavier than a laptop (depending on the chosen computer models). There are screens with integrated computers, but more often than not, they are towers, with the screen not provided with it.

The main operating system

- Windows is the main operating system, in 2024 it will reach more than 400 million users. It is mainly used for its ease of use.

- Linux is mainly used because it is open source and is 100% modular.

- MacOS is very useful for lovers of graphics, drawings, photo editing, the disadvantage is that it is very different from Windows for a normal user

My own opinion

My own opinion is whatever if we take the laptop or the computer, the most significant thing is the power. Like that we don't buy a laptop/computer every year

Conclusion

It doesn't matter which computer we choose, the most important thing is that it meets our needs and requirements.
